

# Malvern Inventors Club

## Malvern Inventors Club Newsletter - January 2007

Next Meeting Date: 8th November 2007 @ The Learning Zone - 7:00pm

### Meeting Night News

At the meeting a list of members interested in being involved with a school inventors club at St James Primary School was started. Ian will now contact St James School Head Teacher and arrange a meeting to push the project further.

John Bibby who already champions a similar project in another school brought along various excellent projects that he has done with his group. These include creating a micrometer, damp testing instrument, digital fuse tester, model airplane, helicopter, even a digital flashing Christmas tree. The skill level of the projects completed by the youngsters was quite astounding and encouraging.

Several new inventions were brought in by members including a working prototype by John Taylor. These were assessed by the group at the

meeting to see if refinements and directions could be suggested.

Dan Heeks brought a radio controlled helicopter, which he flew around the room, (trying not to hit anyone).

Malcolm Victory gave an update on his washing line covers. His first shipment has arrived and he has been busy distributing test samples for final evaluations. If any members are interested in his line covers make contact through his website or at the next meeting.

### New Members

In the January meeting the club welcomed 3 new members. They were: Mike Polley, Jonathan Howell and Keith Falkner. We may have another member called Alan who might be joining in the next meeting.

### Weird Inventions

The specially designed training seat securely sits on the toilet. The cat naturally uses CitiKitty as its new litter box. Each of the four perforated rings is removed from the training seat thus reducing the amount of litter. Once all rings are removed your cat is toilet trained!
